***Allowable Subject Matter***

1. Claims 2-14 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art, especially references Lim (U.S. Patent No. 5,423,085) and Kobayashi (U.S. Patent No. 5,535,252) are related to receiver circuits arranged in receiving units of multiplex equipments. Wherein each receiver circuit comprises at least an identifying circuit or an analog-to-digital converter for identifying/converting a demodulated signal at a predetermined identification level; a clock generation circuit for generating an identification clock for the identifying circuit or the analog-to-digital converter; an equalization circuit for equalizing the demodulated signal obtained by demodulating a multilevel orthogonal modulated signal; and a clock phase detecting circuit for detecting a phase component of a signal identification clock based on input and output signals of the equalization circuit. However, both the prior art references fail to show, teach or suggest that the clock phase detecting circuit comprises at least an error detecting circuit for detecting the input and output signals of the equalization circuit; a signal inclination detecting circuit for detecting the inclination of the demodulated signal; and a clock phase calculating circuit for operating the phase component of the signal identification clock by calculating based on respective outputs from the error detecting circuit and the signal inclination detecting circuit as recited in each of the independent claims 2 and 8.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
